Objective

Find a technical lead role as an experienced highly skilled IT professional within a progressive organization that leverages expertise to achieve short term goals and long term quality.

Work Experience

High Line Corporation, Markham ON

Senior Technical Consultant

(May 2005 – Present)

Technical Consultant

(May 2001 – May 2005)

Government of Nunavut (Iqaluit, Canada)

Technical Team Lead - Contract

Johnson & Johnson (Toronto, Canada)

Technical Team Lead – Contract

New Jersey Transit (New Jersey, USA)

Technical Team Lead – Contract

- Headed the technical development, implementation, and support of over 60+ clients for a range of services spanning multiple industries and disciplines. Initiatives that range from the small scale to multimillion dollar projects for a client base distributed all across North America.
- Responsible for the technical support of development, implementation, and production environments for Oracle Database (9i-12c) and Application Servers (SOA, BI) on Linux and Windows platforms.
- Executed initiatives for Oracle installations, upgrades, and maintenance tracks for implementing and existing client base. Including Oracle Critical Patch Updates (Opatch CPU patches) and regression testing.
- Performed database tuning and performance monitoring at the OS level, DB level, and SQL level.
- Designed, created and executed disaster recovery plans for Oracle RDBMS utilizing RMAN.
- Recognized for Strong PL/SQL development and creative problem solving establishing custom solutions for complex client cases.
- Meet the needs of compliance with corporate and government regulatory bodies for data audit protocols and security reconciliation programs for both Oracle Database and Oracle Application servers.
- Responsible for leading and managing systems analysis, design, coding, integration testing, and database/application support for simultaneous A+ priority projects.
- Defined architectural changes for company software suite and services based on emerging technologies within the Oracle product families and affiliate partners.
- Developed and maintained technical documentation via manuals and online wiki formats for internal, external, and client groups.
- Regarded as an Oracle Discoverer report writer/administrator subject matter expert (SME).
- Provided database technical expertise to application developers, operations, etc. for pre-sales, systems development, and production support.
- Established a strong framework in related technologies including Mail, FTP, Firewall and Networking, Virtualization, Virus Software, and Enterprise backup solutions.
